## Software

- GraphicalModelsMLE.m2: A Macaulay2 package to compute maximum likelihood estimates for Gaussian graphical models. Package included in the standard Macaulay2 distribution (joint work with Carlos Améndola, Roser Homs, Olga Kuznetsova, and Harshit Motwani). Macaulay2 is a computer algebra system developed by Michael Stillman and Daniel Grayson.

- NeuralIdeals: A SageMath package to perform computations with neural ideals associated to neural codes (with Ethan Petersen, Nora Youngs, Ryan Kruse, Dane Miyata, and Rebecca Garcia).  
<https://github.com/e6-1/NeuralIdeals>

- Algstat: An R package for algebraic statistics (with David Kahle and Ruriko Yoshida). Package included in the The Comprehensive R Archive Network (cran).  
<https://github.com/dkahle/algstat>
- GraphicalModels.m2: A Macaulay2 package for algebraic statistics. Package included in the standard Macaulay2 distribution (joint work with Mike Stillman, Sonja Petrovic and Seth Sullivant). Macaulay2 is a computer algebra system developed by Michael Stillman and Daniel Grayson.  
<http://www.math.uiuc.edu/Macaulay2/Packages/>
- Designer and principal developer of the Identifiability of Structural Equation Models website (with Sarah Spielvogel and Seth Sullivant). This website contains software and data related to the parameter identifiability problem for Gaussian graphical models.  
<http://www.shsu.edu/~graphicalmodels/>
- Collaborator in the *Polynome: Discrete System Identification* project. Polynome is a web-based software for the reconstruction and parameter estimation of algebraic models in systems biology, now subsumed into ADAM: Analysis of Dynamic Algebraic Models.  
<http://adam.plantsimlab.org>
- Collaborator in the *Frontiers of reality in Schubert calculus* project. We develop software to execute a large-scale computation to study questions in the Schubert calculus, with a focus on generalizations of the Shapiro conjecture. <http://www.math.tamu.edu/~secant/>
- Designer and principal developer of the Small Phylogenetic Trees website: This website contains algebraic information of small phylogenetic trees under several models of biological evolution. Maple package to perform all computations is included (with J. Porter).
